

Virtual WBC type 23
MLLC (low prevalence) AC2 (high prevalence)

Mostly normal neutrophils, some
Pseudo-Pelger-Huët anomaly/band cell

Virtual WBC type 47
MLLC (low prevalence) AC2 (high prevalence)

Artefacts, captured as having
high textural correlation/low
contrast in MLLC

Granulocytes with low
levels of granularity
(possible resolution artefact)

* color intensity is shifted
away from the center
